

JTrax — open pull requests

Eleven open across three repositories · as of 10 September 2026 · “other session” marks work not from this thread

⚠ **Merge #50 first.** Backend #48 is marked merged but its code never reached main — it was stacked on #47, which merged first, so #48 landed in a branch that was already dead. Until #50 goes in, none of the new notification types exist, and admin #112 writes settings that #50 is what reads.

JTRAX-BACKEND

#50	Land the notification set	Recovers the stranded work: credit-deduction notice at check-out, opt-in low-credit nudge, payment receipts, and the school-wide per-type on/off switch.
#49	Tournament entry hardening	Early-bird fee gains a deadline so it can finally be charged; regulation PDFs stored and served to parents; student ID verified on public entry; “U8” categories enforce the age on the tournament’s start day.

JTRAX-ADMIN — THE CONSOLE

#112	Notification switchboard	Settings gains six switches, one per notification type — the admin decides what the school sends at all. A parent’s own toggle is a separate question; both must be on.
#110	Send credit reminders	A button on the dashboard’s follow-up card. Manual by design — confirms first, and nothing reaches a parent unless someone presses it.
#111	Card payment link	A pending payment produces a Stripe checkout link for the desk to send. Paying settles the payment and releases its credits automatically.
#113	Tournament creation	Real date pickers instead of free text (dates were reaching the database as NULL), early-bird fee and its window, and the uploaded regulation kept and viewable.
#114	Reference dashboard other session	Rebuilds the dashboard to the approved design: status rings that link into the filtered roster, compact icon sidebar. Largely supersedes the earlier chart work.
#115	Reference tournament UI other session stacked	Tournament screens to the approved design, plus round-by-round results from chess-results.com. Targets #113 , not main.

JTRAX-WEB-APP — PARENT & STUDENT PORTALS

#55	Parent inbox goes live	The portal reads the real notification backbone instead of re-deriving alerts from attendance stamps. Six per-type toggles, with low credit off by default and opt-in.
#56	Parent portal fixes	The “black profile” — a child with no photo drew a blank block — now shows a monogram. The near-empty home page carries children and today’s activity again.
#57	Public registration	Age-gated categories that grey out what the server would refuse, a student-ID field the academy actually checks, and a link to read the organiser’s regulation.
#58	Reference portal UI other session stacked	Student and parent surfaces to the approved mobile design, with real account, attendance and Lichess flows preserved. Targets #56 , not main.

Suggested order — #50, then #49, then #112, then the rest; the two stacked PRs last.

Stacked PRs need retargeting. When a parent merges, GitHub will not move its child to main. Run `gh pr edit 115 --base main` and `gh pr edit 58 --base main` at that moment — this is exactly how #48’s commits went missing.
